HOT TUB POWER OUTAGE EMERGENCY LOG

Use this log to communicate with your dealer during a cold-weather power or heating failure.

This is a record, not a freeze-time calculator or a replacement for model-specific service instructions.

Owner / contact:

Spa brand and model:

Date:

CHECKPOINT	RECORD OR STATUS	NOTES / EVIDENCE
1. Outage first noticed Source: utility / spa only / unknown		
2. Utility notice or estimated restoration Utility update reference; estimate may change		
3. Outdoor conditions Air temperature, wind, rain/ice, forecast		
4. Last known spa water temperature If safely known; leave the cover closed		
5. Spa status Display, circulation, heat, fault, level		
6. Cover and exterior Secure cover? Visible leaks or cabinet damage?		
7. Dealer / technician contacted Name, date, time, advice given		
8. Actions agreed for this model Document exact instructions; no improvisation		
9. Power returned or repair completed Time, flow, faults, observed leaks		
10. Water tested and spa cleared for use Sanitizer, pH, owner manual checks		

STOP AND CALL A PROFESSIONAL IF: the GFCI repeatedly trips, parts look frozen, there is a leak, or power is unsafe.

Keep the cover closed. Never guess a safe number of outage hours. Do not drain or restart suspected frozen equipment.

Never connect a generator to home or spa wiring without approved equipment installed by a qualified electrician.

hottubpatio.com | Keep this worksheet with your spa manual. Follow the manufacturer and your service provider.
