

Non-Chlorine Shock Hot Tub Checklist

1 Before You Dose

- ☐ Know your hot tub volume
- ☐ Read the product label dose
- ☐ Test sanitizer and pH
- ☐ Confirm chlorine or bromine is already in range
- ☐ Open the cover and run circulation

2 Dose and Circulate

- ☐ Measure the MPS dose carefully
- ☐ Add only when nobody is in the spa
- ☐ Broadcast or pre-dissolve only if the label says to
- ☐ Run the pump for 15–30 minutes
- ☐ Keep the cover open if the label calls for it

3 Before You Soak Again

- ☐ Retest sanitizer and pH
- ☐ Confirm water looks clear
- ☐ Wait the full label re-entry time
- ☐ Rinse and store the scoop dry

4 Do Not Rely on MPS Alone If

- ☐ Sanitizer is low or zero
- ☐ Water is slimy or strongly cloudy
- ☐ You suspect contamination
- ☐ The spa needs a full drain and refill

MPS is an oxidizer, not a replacement for chlorine or bromine.
